

Wasl Attendance

Employee install and test guide

Android 1.0.1 (19) - iOS build 19 external availability follows Apple Beta App Review

Use only these official install routes

	Google Play Preferred for Android installs and updates. Open official link
	Official APK page Fallback when Google Play is unavailable. Open official link
	Apple TestFlight External testing link. Apple review can delay a new build. Open official link

Important: Never install an APK forwarded through chat or email. Never share your employee password, verification code, or an unredacted attendance screenshot.

1. Install safely

Android - Google Play

Open Google Play, confirm the app is **Wasl Attendance** with package **com.wasl.attendance**, then tap Install or Update. This is the preferred route.

Android - direct APK fallback

Open the official EP download page. Android may ask for one-time permission to install from your browser or file manager. Enable it only for this HTTPS download, install, then turn it off again.

Android package verification

Field	Expected value
App	Wasl Attendance
Version / build	1.0.1 / 19
Package	com.wasl.attendance
Official fallback	https://ep.hilyholding.com/wasl-attendance-download/wasl-attendance.apk
APK SHA-256	274d19b23d5f97806d57705a0118c685fd2fecdd68b18673f16fb3168b4c32e6

iPhone - TestFlight

- 1 Install Apple TestFlight from the App Store.
- 2 External testers open [the official Wasl TestFlight link](#), accept, and install.
- 3 Internal testers sign in with the invited Apple ID and use their invitation email or TestFlight app. There is no separate public internal-test URL.
- 4 If the newest build is not visible, it may still be waiting for Apple Beta App Review. The public link can temporarily show the previous approved beta.

Location permission: it is requested only when you open Punch In or Punch Out. The app, daily summary, and Attendance Report remain available if location is disabled or denied. Background location is not required.

2. Test first-in and last-out

Wasl stores one daily attendance aggregate for the employee. Repeated tests do not create a separate employee-visible list of every intermediate attempt.

Accepted action	Daily First Punch In	Daily Last Punch Out
Punch in at 09:00	09:00	-
Punch out at 13:00	09:00	13:00
Repeat cycle, then punch out at 19:00	09:00 - unchanged	19:00 - updated

Employee test sequence

- 1 Sign in with your employee work email and current password. Keep internet and location enabled.
- 2 Test only at your assigned approved workplace. Wait for a successful confirmation before the next action.
- 3 Punch in, then punch out. If HR requests the multiple-punch test, repeat an in/out cycle.
- 4 Refresh Daily Attendance after each successful punch.
- 5 Confirm **First Punch In** remains the first accepted time and **Last Punch Out** changes to the newest accepted punch-out.
- 6 Log out and sign back in. Confirm the same daily values reload.
- 7 HR/Admin separately verifies the same first/last values in EP Daily Attendance.

Do not assume: a button tap is recorded if the app shows an error, location block, timeout, or no success confirmation.

3. Privacy, support, and feedback

What the app uses

- 1 Precise location is used during punch actions to validate the assigned workplace.
- 2 Attendance identity and punch details are sent over HTTPS to the employer portal.
- 3 Google Maps is used for map and address display.
- 4 Location is not used for advertising or cross-app tracking.

If something fails

Include	Example
Employee identifier	Work email only - never the password
Device	Android/iPhone, model, OS version
Wasl release	Version and build shown for the installed app
When and where	Date, time, time zone, company/branch, inside assigned site?
What happened	Action attempted, exact message, expected vs actual
Connection	Wi-Fi/mobile data and location-permission state
Evidence	Sanitized screenshot with personal data redacted

HR/Admin verification

Employees should not be directed to admin-only pages. HR/Admin verifies the same date and employee in EP Daily Attendance, confirms the first accepted punch-in and latest accepted punch-out, and follows the approved correction process for discrepancies.
